FAQS

How dangerous is lead poisoning?

Lead can cause permanent brain damage, learning disabilities and physical impairment if not treated.

How likely is it that lead is in your home?

If your home is built before 1978 then it is more than likely that your home has lead paint.

What are the signs of lead paint in your home?

Chipped and flaky paint on interior and exterior surfaces.

Homeowners, renters, and landlords whose current residence/property predates 1978

Have a child under six living in the home, an expectant mother, or a child visiting for 60 hours annually.

The home must test positive for lead.

ABOUT THE PROGRAM

The City of Monroe Planning and Urban Development Department is proud to introduce the Safet and Healthy Homes Program, a vital initiative dedicated to enhancing the well-being of young children under the age of six. Our mission is to foster safe and nurturing living environments by pinpointing specific housing areas, raising public awareness about lead poisoning hazards, and identifying children with Elevated Blood Lead Levels (EBLL) at or above 3.5 in the City of Monroe and Ouachita Parish.

We are committed to assisting families in elevating their living conditions by renovating and addressing potential lead or asbestos-based concerns in their homes.
